EDUCATION

G. H. Rasoni College of Engineering | Nagpur, India

Nov 2022 – Jul 2026

B. Tech – Computer Science & Engineering (Cyber Security) | CGPA: 9.45

TECHNICAL SKILLS

Programming Languages: Java, Python, C, Kotlin, C++, SQL, JavaScript

Frameworks & Libraries: React.js, Node.js, FastAPI, Jetpack Compose, Tailwind CSS

Cloud & Platforms: AWS (EC2, S3), Firebase, Oracle XE, PostgreSQL, Docker

Development Tools: Android Studio, VS Code, GitHub, Splunk

Core CS Subject: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Software Developer Intern | Capgemini | Bangalore, India | ([Link](#))

Jan 2026 – Apr 2026

- Developed and tested scalable backend services using Java and Python on AWS, following clean architecture principles to ensure maintainable, production-ready code.
- Applied cloud deployment strategies (EC2, S3) to personal and team projects, gaining hands-on experience with enterprise-grade infrastructure.
- Consistently delivered daily progress within team workflows, developing professional discipline around code reviews, documentation, and cross-team communication.

Full Stack Web/App Development Intern | ANORG Technologies | ([Link](#))

Jun 2025 – Nov 2025

- Contributed to frontend and backend tasks across 3+ active projects, integrating REST APIs and collaborating via Git-based workflows including branching, PR reviews, and task tracking.
- Observed and documented senior engineers' architecture decisions for a multi-service deployment, improving personal understanding of system design trade-offs.
- Maintained 100% daily reporting cadence, demonstrating accountability and structured communication in a remote corporate environment.

Software Development Intern | Center of Excellence (AIML), GHRCE | ([Link](#))

Dec 2024 – Jan 2025

- Built an IoT-based smart medicine dispenser using Arduino, ESP32, Firebase, and Android; improved medication scheduling efficiency by 66% through QR-based secure authentication.
- Optimized the Android app for low-resource devices, reducing average response time by 40% through targeted performance profiling and UI rendering improvements.

PROJECT

DECAID: Decentralized Academic Identity & Credential Risk Assessment System

Technologies: React, Node.js, Express, Python (FastAPI), PostgreSQL, Ethereum, Pinata, IPFS | ([GitHub](#))

- Built a full-stack decentralized platform for tamper-proof academic credential verification using Ethereum smart contracts and IPFS-based distributed storage.
- Implemented Zero-Knowledge Proof (ZKP) verification to enable privacy-preserving, selective data sharing — eliminating the need for third-party credential authorities.
- Designed the system to handle multi-institution credential issuance, supporting concurrent verifications across a PostgreSQL-backed off-chain registry.

BMI Calculator Application

Technologies: Kotlin, XML, Jetpack Compose | ([GitHub](#))

- Designed and published a real-time BMI tracking app using MVVM architecture with LiveData, achieving 99% calculation accuracy and a 60% reduction in UI rendering latency.
- Structured the codebase for testability and modularity, implementing separation of concerns across ViewModel, Repository, and UI layers.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Foundations Associate – Oracle ([Link](#))
- Cloud Practitioner Essentials – AWS ([Link](#))
- FastAPI Masterclass Certification – Udemy ([Link](#))

EXTRACURRICULAR ACTIVITIES

- Published research paper at Microsoft CMT International Conference 2025. ([Link](#))
- Consistently solved 350+ algorithmic problems on Leetcode and GFG with a 40% acceptance rate.
