

Chetan Awari

Software Engineer | Agentic AI | Python | Java | AWS

+91-7843032964 | chetanawari2002@gmail.com | [linkedin.com/in/chetan-awari](https://www.linkedin.com/in/chetan-awari) | github.com/mr-chetan-66 | Nagpur, India

SUMMARY

Steady hands, curious mind. Software Engineer with a passion for **Cloud & AI**, building RAG and agentic AI applications, and enjoying every bit of the build. Innate with **resilience**, known for **brevity** and **composure**. Always looking to contribute, learn fast, and **take on meaningful challenges** while growing with the team.

TECHNICAL SKILLS

Languages : Java, Python, C, SQL, JavaScript
Backend : FastAPI, Spring Boot, Node.js, React.js, REST APIs, Microservices, SQLAlchemy
AI / GenAI : Retrieval-Augmented Generation (RAG), LangChain, LangGraph, Hybrid Search, Quantization, AI agent harness
Cloud & DevOps : AWS (EC2, IAM, S3, SSM, CloudFront), Docker, CI/CD (GitHub Actions), Firebase
Databases : PostgreSQL, RDS, Aurora, DynamoDB, Redis, ChromaDB, SQLite
Core CS : Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks

EXPERIENCE

Software Developer Intern | Capgemini | Virtual | [Verify](#) Jan 2026 – Apr 2026

- Earned **distinction** in structured **Java** and **Python** training modules.
- Developed and evaluated **FastAPI** backend components and **AWS** cloud workflows; earned an **outstanding sprint evaluation**.
- Collaborated with the team in **sprint-based delivery**, completing assigned backend tasks on schedule under **tight deadlines**.

Full Stack Developer Intern | ANORG Technologies | Nagpur | [Verify](#) Jun 2025 – Nov 2025

- Contributed to frontend and backend tasks across **3+ projects**, integrating **REST APIs** and using **Git** branching and PR reviews.
- Documented architecture decisions for a **multi-service deployment**.
- Developed micro elements of reactive frontend of e-com application and handling backend with database.

PROJECTS

EvidenceFlow AI – Hybrid RAG Knowledge System | [Live](#) | [Code](#)

Tech Stack: Python, FastAPI, React, LangChain, ChromaDB, BM25, Cohere, Groq, PostgreSQL, AWS EC2/RDS, Nginx

- Engineered an agentic **RAG pipeline** combining **BM25** and **ChromaDB** vector search with **Cohere reranking** and automatic query rewriting when retrieved evidence is weak.
- Implemented **evidence grading, citation verification and semantic caching** to return grounded answers with **confidence scores**; added an evaluation mode for **recall, precision and latency**.
- Configured **AWS EC2 + RDS PostgreSQL** deployment with **Nginx** and **systemd**; added email/password authentication and admin upload.

HalfGPT – Agentic AI Chatbot on AWS | [Live](#) | [Code](#)

Tech Stack: Python, FastAPI, LangGraph, LangChain, Groq, ChromaDB, SQLite, Docker, GitHub Actions, AWS ECR/EC2/SSM

- Deployed a streaming **Routing chatbot** (**LangGraph** agents, **ChromaDB** retrieval, **Tavily** search fallback) as a **Docker** container on **EC2**.
- Streamlined releases with a **GitHub Actions CI/CD pipeline** (**ECR → EC2 via SSM Run Command**) that needs no SSH access.
- Secured the runtime with **Secrets Manager** and scoped **IAM roles**; used a persistent **EBS volume** so chat data and vector index survive redeploy.

ViraLens AI – Fact-Checking Engine (Text + Image) | [Live](#) | [Code](#)

Tech Stack: Python, FastAPI, React, Vite, Groq (Llama 3), Tavily, Serper, Tesseract OCR

- Developed a fact-checker that extracts claims from **text and screenshots** using **Tesseract OCR** with **Groq Vision** fallback, returning a verdict, **confidence score** and clickable citations.
- Designed a **4-tier source-credibility ranking** over **Tavily** and **Serper** results so official sources and fact-checkers outrank blogs.
- Built a **React + Vite** frontend served by **FastAPI**; validated the pipeline with an automated test suite (**100% passing**).

Inventory Management System | [Live](#) | [Code](#)

Tech Stack: React, FastAPI, Redis Stack, Redis Streams, Microservices, Render

- Created separate **inventory and payment microservices** in **FastAPI** with **Redis** storage and a **React** frontend.
- Implemented **event-driven order processing** with **Redis Streams** for asynchronous stock updates, plus a refund consumer that marks orders refunded when stock cannot be fulfilled.
- Deployed both APIs on **Render** with environment-based configuration and CORS.

Cloud Portfolio Platform – AWS Serverless | [Live](#) | [Code](#)

Tech Stack: AWS S3, CloudFront, Lambda, SQS, DynamoDB, SNS, IAM, GitHub Actions, JavaScript, HTML, CSS

- Built and deployed a serverless portfolio site (**HTML, CSS, JavaScript**) on private **S3 + CloudFront** with **GitHub Actions** OIDC-based CI/CD and **IAM**-secured infrastructure.
- Implemented an event-driven recruiter-interaction tracking pipeline with **Lambda, SQS, DynamoDB TTL** and **SNS** email alerts, using a cost-aware serverless design.

EDUCATION

- **G. H. Raisoni College of Engineering**, Nagpur, India Nov 2022 – Jun 2026
- Bachelor of Technology – Computer Science & Engineering (Cyber Security) | **CGPA: 9.23**

CERTIFICATIONS & PUBLICATION

- Oracle Cloud Infrastructure 2025 Certified Foundations Associate – Oracle | [Verify](#)
- AWS Cloud Practitioner Essentials – AWS | [Verify](#)
- Published research paper, International Conference 2025 | [Verify](#)
